CERTIFICATE

This is to certify that Mr./Ms. RISHABH SANTOSH YADAV of F.Y. Information Technology (FYIT) Roll No. 2541060 has satisfactorily completed the Web Designing Mini Project entitled Portfolio Prepared for GitHub Pages Deployment during the academic year 2025 – 2026, as a part of the practical requirement. The project work is found to be satisfactory and is approved for submission.

1. INTRODUCTION :-

This project is titled "Portfolio Prepared for GitHub Pages Deployment".

The main aim of this project is to create a personal portfolio website to showcase skills, projects, and personal information. A portfolio website helps a developer present their work professionally.

In this project, HTML is used to create the structure of the website, CSS is used for designing and styling, and JavaScript is used to add animations and interactive features. After designing the website, it is deployed using GitHub Pages so that it can be accessed online through a public link.

This project helps in understanding website development and deployment process.

2. REQUIREMENT SPECIFICATION

Hardware Requirements:

- **Computer or Laptop**
- **Internet Connection**
- **Software Requirements:**

Web Browser (Chrome, Edge, etc.)

- **Code Editor (VS Code)**
- **HTML**
- **CSS**
- **JavaScript**
- **Git**
- **GitHub Account**
- **GitHub Pages**

The system should support responsive design so that the website works properly on desktop and mobile devices.

3. SYSTEM DESIGN :-

The system design of this project is simple and user-friendly. The website is divided into different sections such as Home, About Me, Skills, Projects, and Contact. The homepage displays the logo, name, and main details.

When the user scrolls, other sections appear. Animations and background effects are added to make the website attractive. The layout is responsive so it adjusts according to screen size.

4. SYSTEM IMPLEMENTATION:-

The implementation of the project is done using HTML, CSS, and JavaScript. HTML is used to create the basic structure and sections of the website.

CSS is used to design the layout, add colors, animations, and responsive features. JavaScript is used to add interactive elements like button effects, popups, and animations.

After completing the development, the project is uploaded to GitHub and deployed using GitHub Pages.

5. SYSTEM TESTING AND RESULTS

The website is tested on different browsers like Chrome and Edge to ensure it works properly.

All buttons, animations, and links are checked to confirm they function correctly. The responsive design is tested on different screen sizes. After testing, the website works smoothly and is successfully deployed online using GitHub Pages.

6. FUTURE SCOPE AND CONCLUSION

Future Scope:

In the future, more features like a contact form with email integration, database connection, dark/light theme switch, and more advanced animations can be added. The portfolio can also be connected with LinkedIn and other professional platforms.

Conclusion:

This project successfully demonstrates the creation and deployment of a personal portfolio website. It helps in understanding web development concepts and how to host a website online using GitHub
